F	Allen Screws	14

Diagram

3 - Assembling the Base

Make sure that you have gotten all of the parts together. Do not throw any of the parts containers away until everything has been assembled and it is guranteed that there are no missing parts.

This step May be easier f the Station Top is placed on its side. When doing this, make sure that the surface is soft and wont scratch the metal.

Attach the Circular Base to the 4 Point base by lining up the allen screw holes and then screwing in the allen screws.

2 - Attaching the Station Top and Base

While the Station Top is still turned on its side, align the holes in the 4 Point base and the bottom of the Station Top and then screw in the Allen bolts.

3 - Attaching the Side Ring Holder

Line the Ring Holder up with the screw holes on the side of the Station Top and then screw the remaining allen screws into the holes.

After this, Insert the Rig inserts into their aproppiate spots. Make sure that the rubber ring that came with the metal rings has the rounded side facing upwards before inserting.
