Model # MH-920

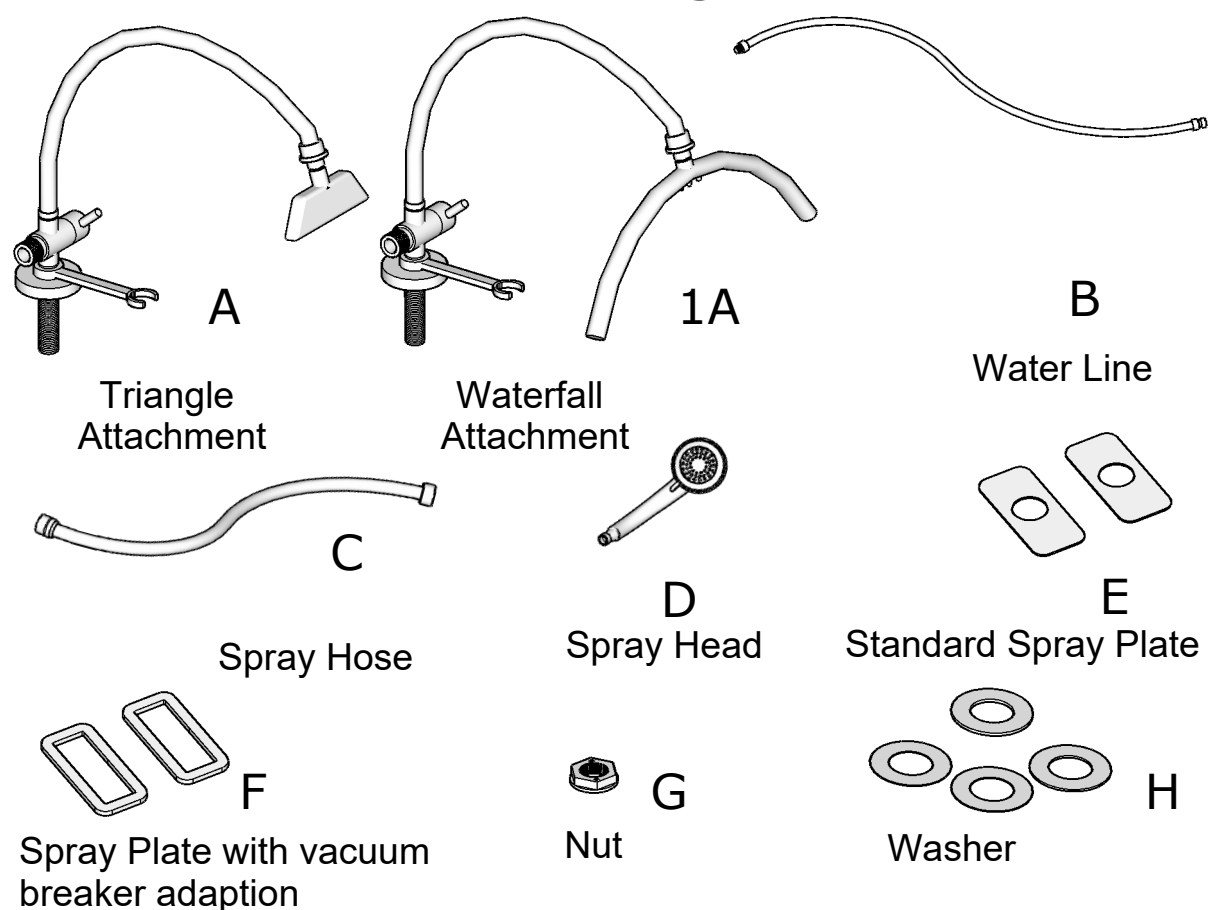

TRIANGLE HEAD SPRAY (A)

ARCHED HEAD SPRAY (1A)

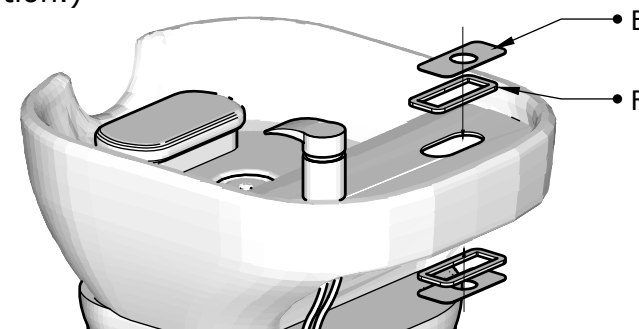

PARTS

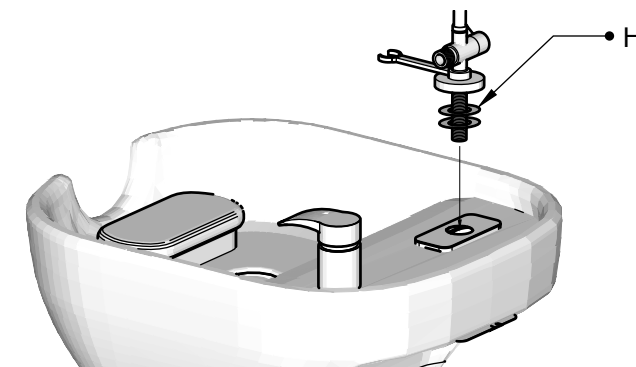

*Open all boxes to check for parts before beginning assembly.

Assembly instructions:

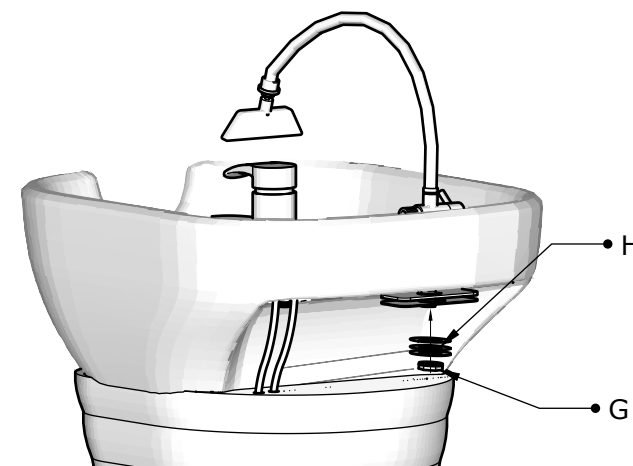

- Once previous spray hose is removed, place your spray plate directly on the bowl. Your rubber gasket should be touching the bowl, and the chrome spray plate will sit on top of the gasket. You will have one on the under side of the bowl and one on top as pictured. (If you are using a vacuum breaker, you will use the spray plate with vacuum breaker adaption.)

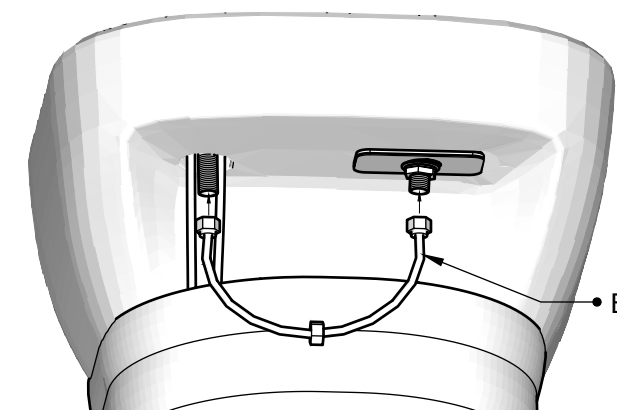

- Insert the head spa attachment into your bowl. Before you place the attachment, ensure you have removed the washers and only have these two rubber gaskets on the attachment. These two rubber gaskets will sit sandwiched in between your spray plate and head spa attachment.

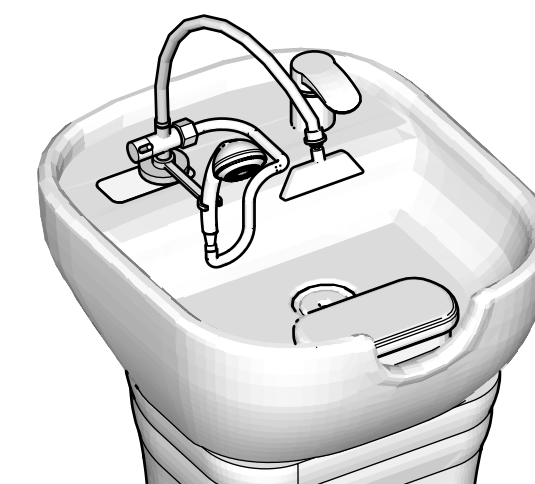

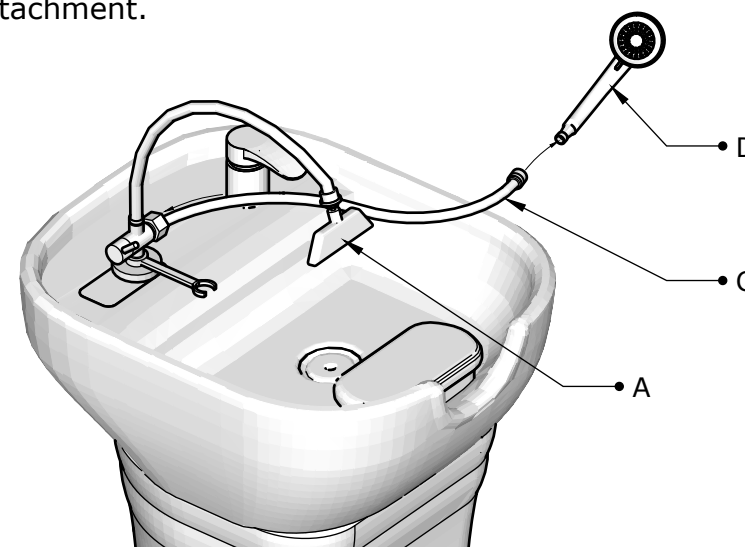

- Once your head spa attachment is inserted into the bowl, you will need to attach the washers back onto the attachment from the under side of the bowl. Once the washers are back in place, make sure the screws are tightened to stabilize the attachment.

- Install your water line. To install your water line, you will need to unscrew the brass coupling connected to your faucet. Once you have unscrewed the brass coupling, you can now screw on your water line.

- Attach your spray hose. To attach your spray hose, you will first need to attach the spray head to the hose. You will attach the other end of the hose to the headspa attachment.

Your 2-in-1 HeadSpa attachment is now installed and ready to use! If any assistance is needed, please give our customer service team a call!
